RESPONSE TO AMENDMENT

Drawings

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

Claims 1 and 4-11 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claim 1, prior art fails to teach or reasonably suggest a light receiving circuit capable of compensating a temperature dependence of a light receiving device comprising a coupling resistor for coupling an output of a differential amplifier to an input of a bias supply circuit wherein the differential amplifier operates in an inverting mode to adjust a division ratio of a division divider as a linear function to temperatures so as to compensate a temperature dependence of the light-receiving device, in addition to the other limitations of the claim.

Claims not specifically addressed are allowable due to their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kimura (US 6,851,849) discloses a light receiving circuit having a bias supply circuit, a voltage divider, an amplifier with a resistor connected between an inverting input and an output of the amplifier. Kimura fails to disclose a coupling resistor that couples the output of the differential amplifier to the input of the bias supply circuit and the differential amplifier adjusting the division ratio of the voltage divider as a linear function of temperature.
